Expect the Best!
Women of every age can trust their health care to The University Doctors Department of Obstetrics and Gynecology, where highly sophisticated, patient-focused health services are delivered in a warm, caring and compassionate environment.
Our physicians, midwives and staff work collaboratively to provide personalized health care to women of all ages, with a primary focus on wellness, health awareness and disease prevention.

GENERAL GYNECOLOGIC SERVICES
Routine gynecologic care is vitally important to the health and wellness of women. We provide the following services:
• Annual preventive examinations
• Pap smears
• Breast exams
• Personalized health and wellness education
• Contraceptive education and management
• Menopause management
• PMS care
• Diagnosis and treatment of STDs
• Colposcopy
• Consultations for gynecologic surgeries such as hysterectomy, sterilization, hysteroscopy, laparoscopy and more

GENERAL OBSTETRIC SERVICES
Having a baby can be one of the most exciting times in a woman’s life. Our health care team is here to guide you every step of the way, with regularly scheduled office visits and a wealth of information for the smoothest pregnancy and delivery possible.
Deliveries are performed at Kennedy University Hospital in Washington Township. High-risk obstetrical issues, such as diabetes management or advanced maternal age, are managed by our obstetricians in conjunction with our perinatologists in our division of Maternal/Fetal Medicine.

MIDWIFERY SERVICES
Our experienced midwives care for women in all stages of life, from the teenage years to post-menopause. Midwives add a unique component to our obstetrical program, sharing caring deliveries while emphasizing the process of pregnancy and birth through education, health care and supportive intervention. They advocate for non-intervention in normal processes and promote health education for women throughout their child-bearing cycle. Of course, if complications arise during the pregnancy or delivery, our patients have the advantage of a physician specialist who can collaborate to ensure a safe and healthy outcome for mother and child.

MATERNAL/FETAL MEDICINE
Care during high-risk pregnancies begins with a thorough and comprehensive fetal assessment early in a pregnancy. The use of ultrasound blood tests and specialized echocardiography are just a few of the non-invasive procedures that we use to assess any concerns. Our team will provide a comprehensive evaluation that includes an action plan appropriate for both mother and child to minimize any potential risk throughout the pregnancy.
